LEGIC

Your single-application Master-Token System-Control

- ✓ **ATC1024-MV110 as smart card platform**

- ✓ **Fixed 12 bytes stamp and differentiated at level 7**

- ✓ **Differentiate with a simple and cheap physical security concept**

Ingenious Security Concept for Small Systems

Do you want to make sure your passwords are safe at all times? Do you intend to be independent from the supply chain? Our physical Master-Token System-Control allows you to do both and takes care of keeping the control over your application in your hands only.

MTSC is a unique concept

LEGIC's Master-Token System-Control is the recognized and proven solution for secure and easy management of contactless smart card applications. The Master-Token itself is the central element in this security concept and grants full control over the system management.

You are able to efficiently control the creation of smart cards and the authorization of readers, that are to be part of your system.

Its smart card form factor allows you to manage the physical Master-To-ken the same way you keep your physical keys safe. No passwords are needed and your Master-Tokens are fully protected against duplication.
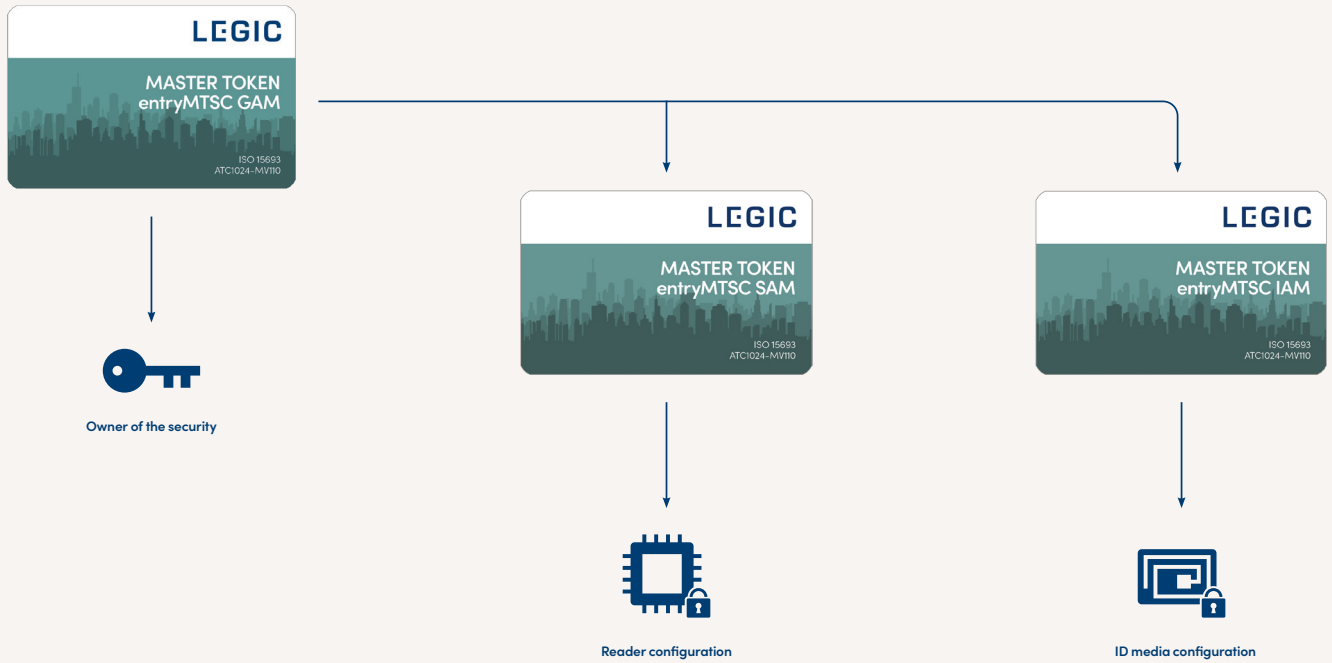

entryMTSC for single-application

Based on the ingenious concept of Master-Token System-Control, the entryMTSC provides a lot of security and control at reasonable cost. The feature set is limited to one application only and misses the ability to create hierarchical authorizations, unlike MTSC. Hence the entryMTSC is the ideal solution for simple installations with hundreds of cards.

No LEGIC Partnership necessary

Unlike MTSC, entryMTSC is available without being a LEGIC Partner and supports you in keeping the control over your application in your hands, independent from your supply chain and free from recurring fees.

ID media configuration

Advantages

- Independence from supply chain
- Control over your system in your hands
- future extension to multi-application with additional entry-MTSC possible
- security solution at reasonable cost
- no recurring fees or maintenance contracts necessary

What you get

With the entryMTSC you get:
- 1 General Authorization Medium (GAM)
- 1 Identity Authorization Medium (IAM)
- 1 System Authorization Medium (SAM)

Specifications

MTSC Zone	A
Applications	1
Compatibility with LEGIC security modules	2000 series 4000 series 6000 series
Compatibility with LEGIC standard access segments	Yes
Compatibility with LEGIC cash segments	No
Master-Token medium	ATC1024-MV110

Benefits

- System integrator independency
- Simple and secure way to control and operate contactless installations
- Key & authorization management at reasonable cost
